

# PHOTOVISUALIZATION

A personal exploration and the use of photovisualization  
as a technique to humanize data

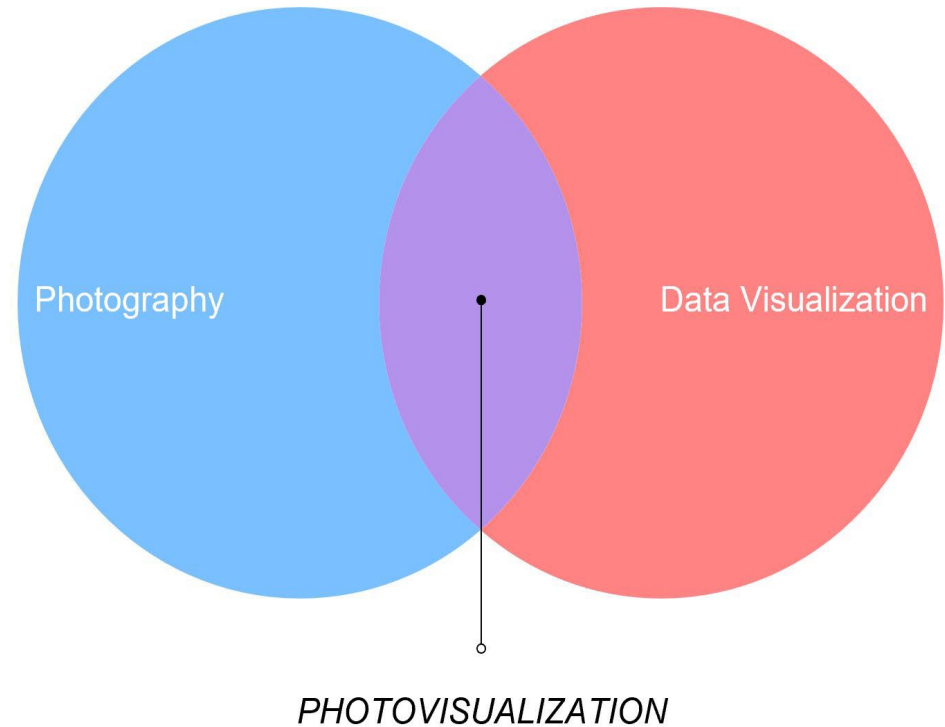

# PHOTOVISUALIZATION

"**Photovisualization**" is at the intersection of photography and data visualization, and is a type of data visualization that is a collection of images that use various techniques.

This involves where the photograph is altered by techniques called Snapshot, Exposure and Post Processing to capture visual information, and complex phenomena in new ways.

These can be single or a collection/connection of 100, 1000's of photographs.

# THE MOST IMPORTANT QUESTION

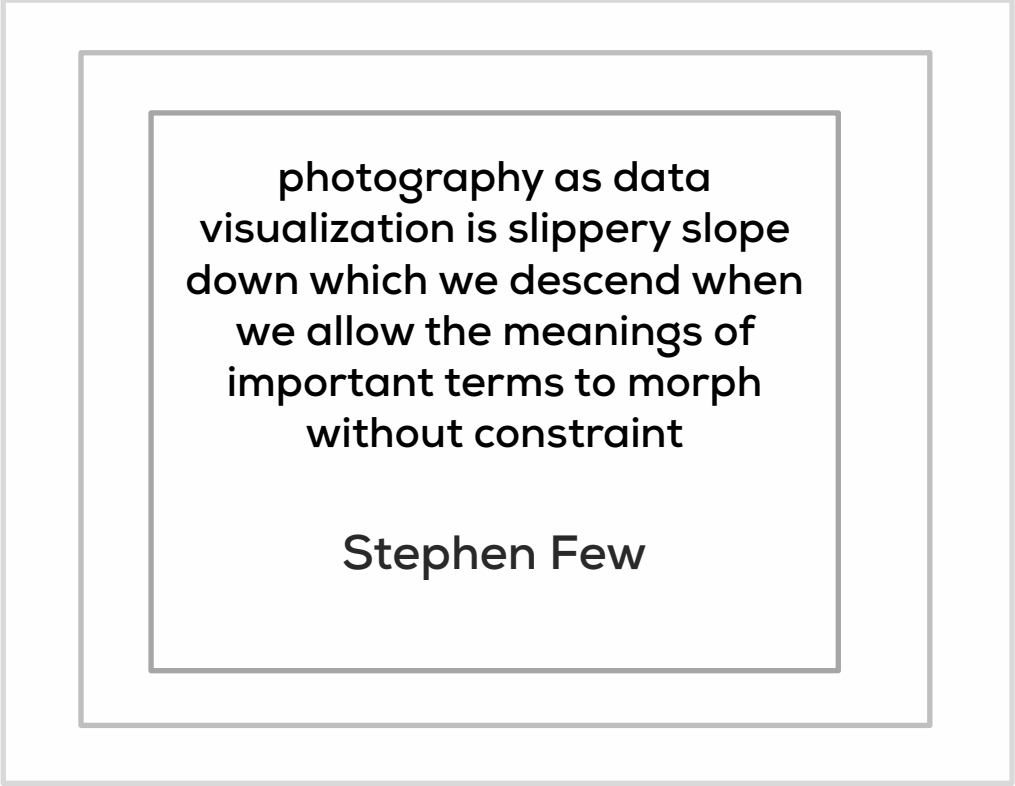

**IS  
PHOTOVISUALIZATION  
PART OF  
DATA VISUALIZATION?**

# ONE POV

the purpose of visualization is  
insight, not pictures. By  
addressing meaningful  
problems and difficult  
decisions.

Ben Shneiderman

photography as data  
visualization is slippery slope  
down which we descend when  
we allow the meanings of  
important terms to morph  
without constraint

Stephen Few

# ANOTHER POV

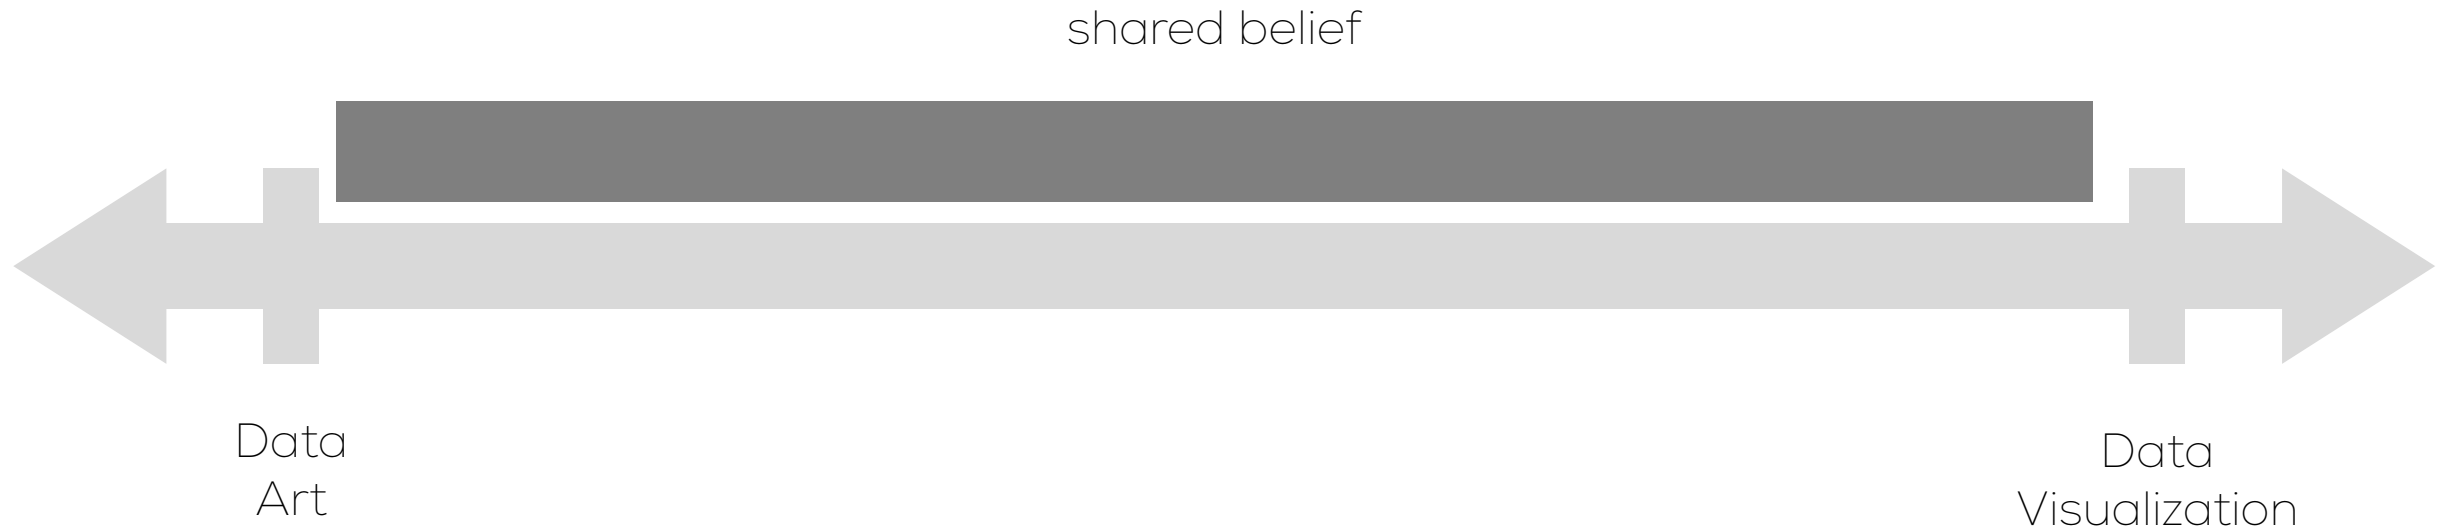

# WHERE DOES PHOTOVISUALIZATION FALL

common perception

# WHERE DOES PHOTOVISUALIZATION FALL

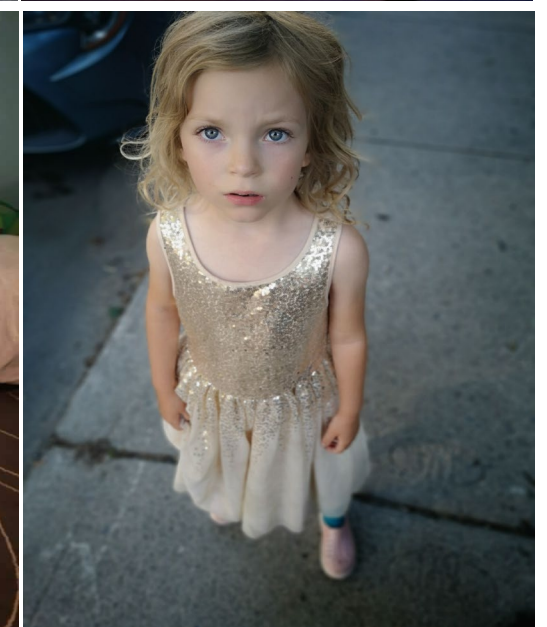

This project explores  
**photovisualization**  
**approaches** centered on  
**selected moments** and  
**memories.**

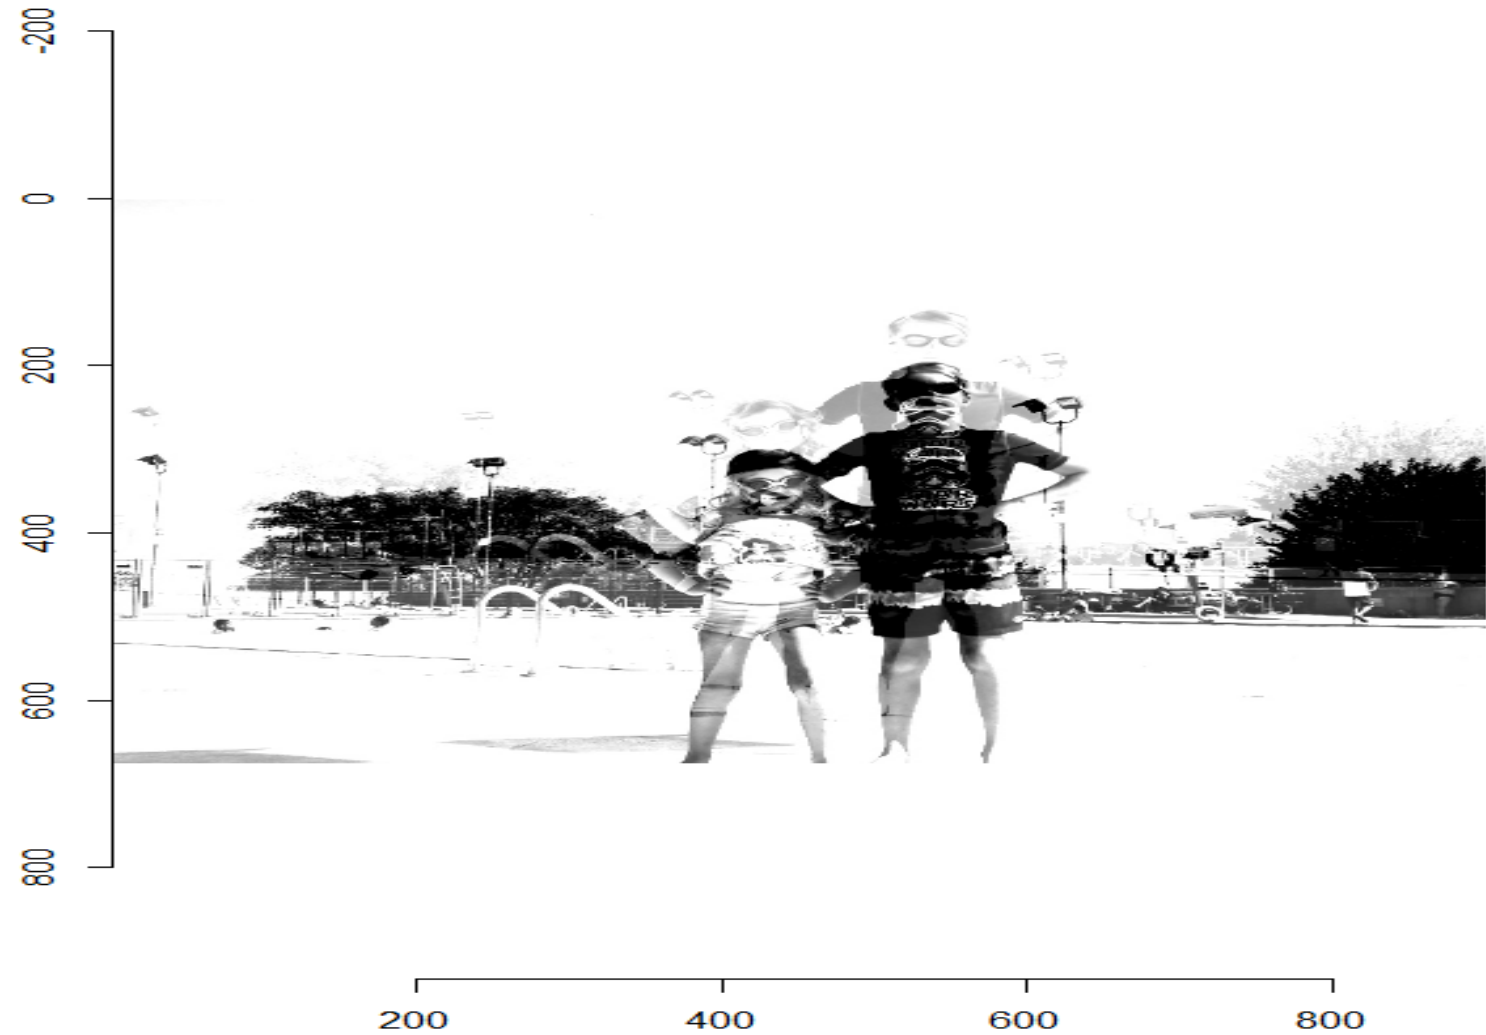

Source photograph: Chris Hayes, 2020

It will be through these approaches, the exposure and development of the **image will be altered** thus **creating new worlds and different perspective on change and time.**

Dispel the myth that designing a **visualization** is only for the end of a **data analysis process** or when you are potentially ready to communicate insights perhaps **by a more conventional chart choice.**

**Photovisualization**  
can be used for  
**sustained reflection** and  
**imaginative response.**

Source photograph: Chris Hayes, 2020

If **data visualization** is about **telling stories**, then using the techniques and styles within **photovisualization** is another practical way to tell a compelling story through images and develop an emotional response and connection.

# PROTOTYPE OVERVIEW

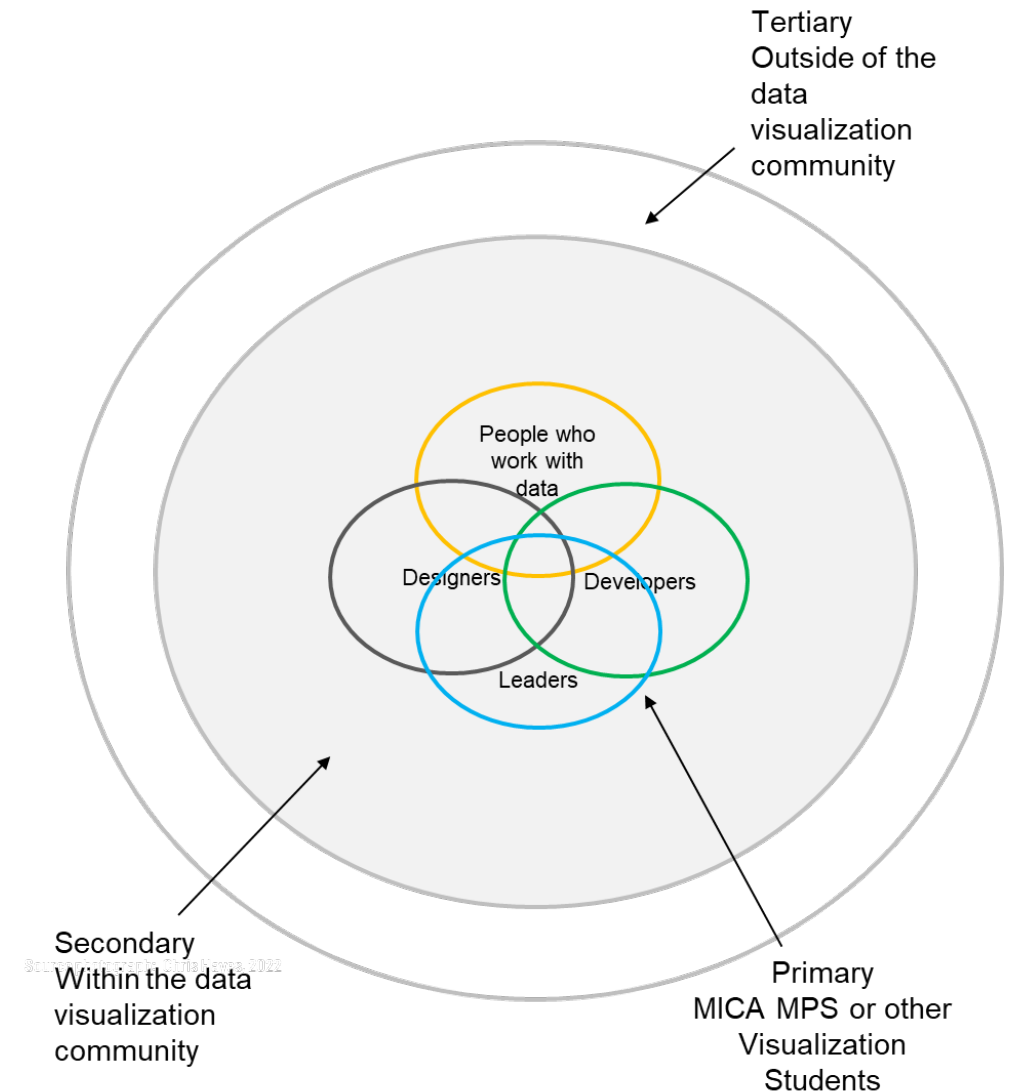

# PROTOTYPE OVERVIEW

# AUDIENCE

I will be aiming this work at 4 primary audience groups:

	Who	What do they do?	Important Elements to bring forward in the prototype
1	Analyst	primarily work with data	tools employed, and linking the technique and style to data visualization use cases
2	Designers	involved with the entire design process of a product	ensuring maximizing impact across all senses.
3	Developers	primarily focused new product development	Maximize utility of the medium and all of the features and functionality
4	Leaders	set direction to do the right thing to move forward	ensure the vision via the rational, and provide well designed 'argument' to change mindsets, and worlds

# READING STYLES

I have also accounted for 4 various and different reading styles:

	Style	Description	Important Elements to bring forward in the prototype
1	Elementary	Basic, rudimentary level of reading. follow the plot, and have a solid grasp what the material is trying to say	visual encoding via colour tie the various techniques to the taxonomy, and use case examples
2	Inspectional systematic skimming	Scroll through and read to gauge interest, if so scroll back to the top and view/read structured manner	consistency in layout, organizational structure, and same location/symbology would be critical.
	Inspectional Superficial Reading	Viewer would go from page to page, reading every single word but not stopping	Ensure natural flow of the product itself, combined with rich photovisualization examples and content within would be critical.
3	Analytical	This style is used when the viewer wants to understand the topic in depth	Project covers rationale, data analysis & interpretation, audience, design, & user experience are answered with completeness.
4	Syntopic	Comparative reading	sources resources on subject to compare and contrast the ideas are presented and made available

**WHY THIS IS  
IMPORTANT**

"A photograph takes the chaotic, tangible, multi-dimensional world and reduces it into something flat, and still."

Source photograph: Chris Hayes, 2020

to think about data visualization beyond a chart that preserves the numbers it represents, but suggesting photographs too could be used as an optical technique to reveal a complex phenomenon, abstract rather than intuitive.

Source photograph: Chris Hayes, 2020

promote sustained reflection rather than immediate insight by provoking a unique imaginative response in each viewer.

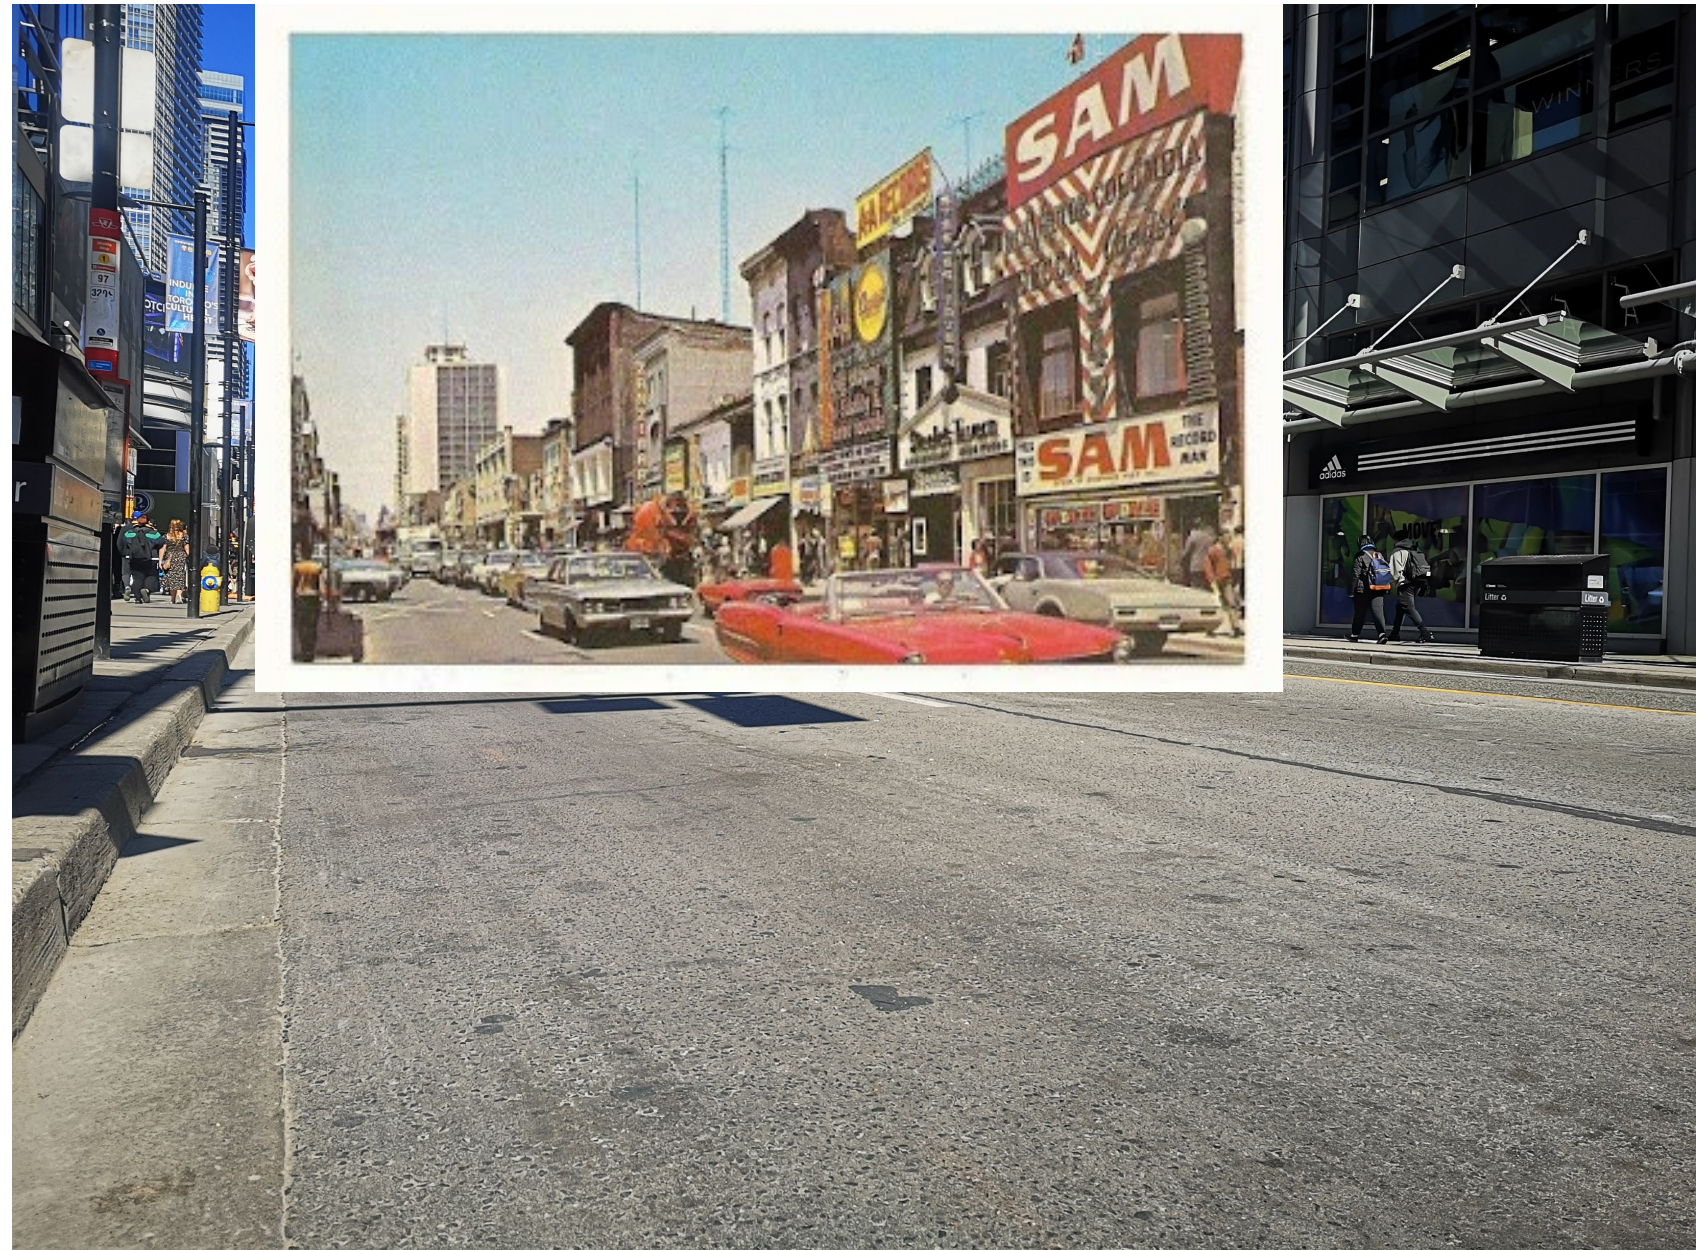

Source photograph: Chris Hayes, 2020

immerse into the  
photograph to see the  
passage of time, the  
connectedness of family

immerse into the  
photograph to see the  
passage of time, and of  
place

immerse into the  
photograph to see  
events, and the motion  
along an unseen vertical  
axis.

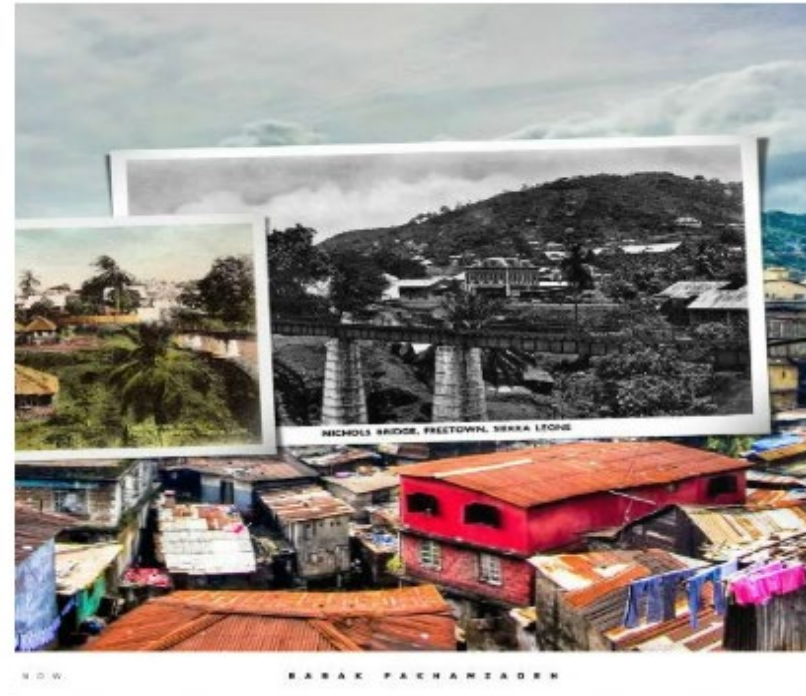

# INSPIRATION

PHOTOVIZ BY  
NICHOLAS FELTON

Photoviz shows how data is being visualized through photographic techniques such as long and multiple exposures, making the invisible visible, and revealing more detail than classic photojournalism.

BABK FAKHAMZADEH  
SNAPSHOT  
THEN AND NOW

Babak Fakhmzadeh places old postcards over current images of Freetown, Sierra Leone. Apart from showing the differences in terms of construction and development, the images depict the economic and social changes over time

# INSPIRATION

JULIE JACOBSON  
POST PROCESSING  
BLEND

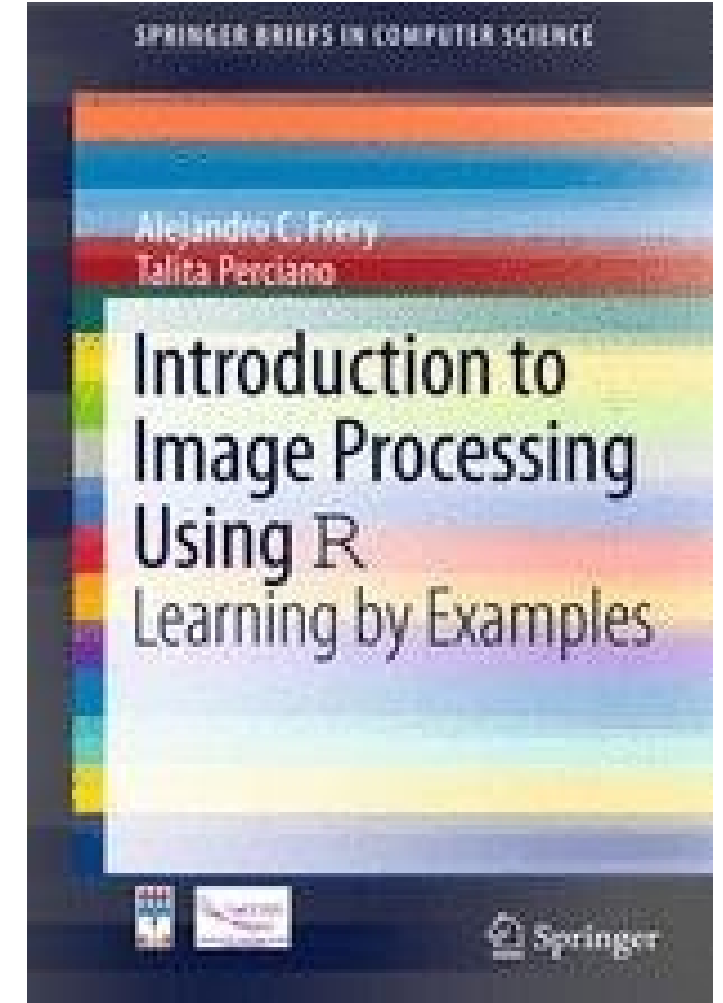

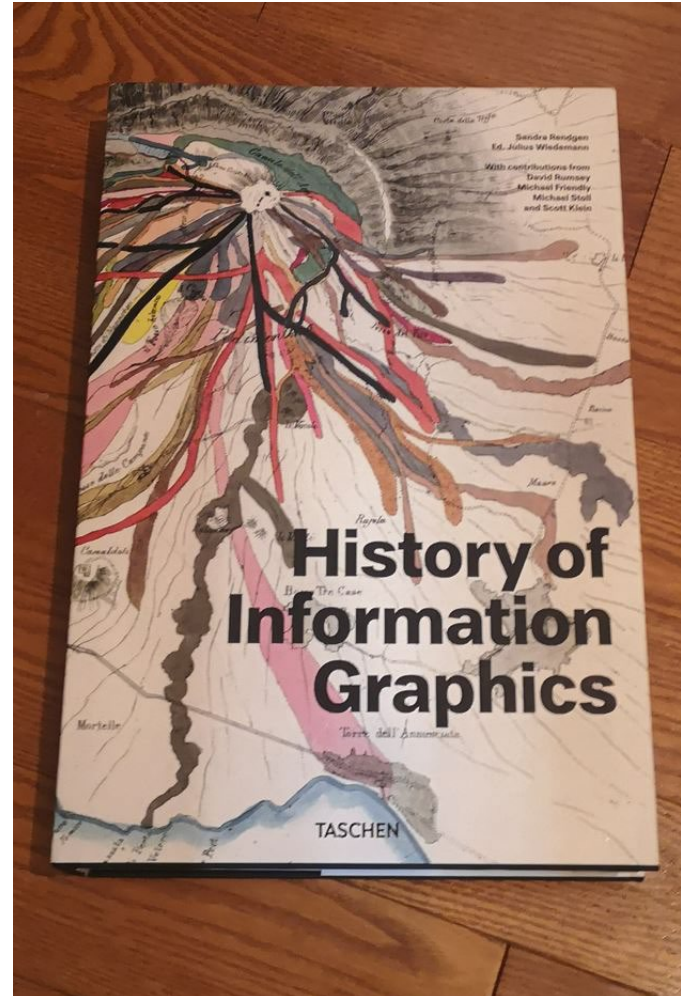

In this multiple exposure photo which has been alerted via post processing, U.S. gymnast Kyla Ross performs on the balance beam during the Artistic Gymnastics women's team final at the 2012 Summer Olympics, Tuesday, July 31, 2012, in London

BOBBLY NEEL  
POST PROCESSING  
COLLAGE

Bobby Neel Adams captures the passage of time and family relationships, creating images by combining two separate photos that are carefully torn in a certain way and reassembled. He calls this method photo-surgery.

# INSPIRATION

# DATA

“the photos are the data, it carries the data with it.” Andy Kirk

Nearly 600+  
photographs  
since 2020 were  
taken and  
considered

## SNAP SHOT

A snap shot becomes a photoviz when it can express information about the depicted scene that is not typically visible or naturally apparent. By capturing multiple views and combining multiple moments or perspectives, snapshots are distinguished by comparisons they allow and the larger view they create.

20

21

## THEN AND NOW

A style within the Snap Shot technique, **Then & Now** involves reframing an old photograph into a contemporary scene or context to create a link that enables the viewer a means of comparison

and connection between those two moments. This simple layering allows a snapshot to express a much longer story by revealing the forgotten history of a place.

It was here at Toronto Metro University, Kerr Hall studying urban processes focused on tangential budget lines and old rent curves, distance-minimizing constrained maximization equations, and quasi-hexagonal grids of inter- and intra-urban

location analysis. This building formulated my backbone of my undergraduate years, where I learned the structure as to how to use data differently, a fitting tribute to the overlay of its 1960's construction postcard.

22

These distinct and pivotal moments in my history as to how Toronto would become our home. From first city trips which spurred many more, post-secondary school via Toronto Metro University which formed my data foundation

## WHY TORONTO

and skeleton to build upon in my professional career. It was there where I met my partner, in a building that stood the test of time where a chance meeting set the stage for our journey together.

I have worked in this area since graduating in 1999 and this building, built in 1910 represents crossroads. Where a chance meeting, between two strangers transforms to a relationship, my partner and set the stage for our new chapter together.

CHARTERED BY: 2022 © Dave Proulx/STOCK/ADAM - TORONTO - VANCE STREET - 1940S DAILY RECORD - TORONTO, CANADA - 1940S

## WHY TORONTO

It was here, at Sam The Record Man where my grandfather would take me in 1979 through the 1980s. The neighbourhood was electric, packed with different retail, fashion and people. I often wonder, was it those trips where the seeds planted, that Toronto would become my destination to spend the majority of my adult life from 1994 onwards.

Although this portion of Yonge Street where Sam was located has been corporatized, one can spot glimpses of its former glory. If you look hard, you can re-imagine the 1970's vehicles and pedestrians are interwoven proving that times do change amongst of the present streetscape.

## WHY TORONTO

These distinct and pivotal moments in my history as to how Toronto would become our home. From first city trips which spurred many more, post secondary school via Toronto Metro University which formed my data foundation

and skeleton to build upon in my first big role in my professional career. It was there where I met my partner, in a building that stood the test of time where a chance meeting set the stage for our journey together.

CHAVES SEPT 2002 G Toronto Archives, Queen G Yonge Dec 30 1913

I have worked in this area since graduating in 1999 and this building, built in 1910 represents crossroads. Where a chance meeting, between two strangers transforms to a relationship, my partner and set the stage for our new chapter, together.

If you look closely you can see the shadows of the former building its glory, and if you squint, the former bankers of yester years congregating amongst the pedestrians of today.

# DESIGN

## Gestalt Laws

**Proximity** by context near visuals, use of small multiples.

**Connectedness** by grouping relationships.

**Continuity** by limiting and reducing colour intensity.

**Enclosure** by use of 'white space' and colour to frame content between visuals and create organization.

**Symmetry** via a sense of solidity and order, via horizontal and vertical organization of content.

## Visual Queries

**Consistency** and limited use of colour to visual encode area within the product, and text highlighting for interactivity elements.

**Shape** via symbology via symbols, frames, to illustrate interactive elements

**Proximity** via visual elements and text are grouped together with the aid of white space to draw the eye toward them.

**Size** via text sizing and images to aid user to notice larger elements easily, and create structure / flow.

## Pattern Perception

**Consistency** across content pieces allows viewer to recognize important elements,

The use of line on major focus pieces separate journey story.

Compositions components layout are organized in same location regardless of photovisualization technique/style.

Text is structured via font size to create visual hierarchy across composition.

## Universal Design Principles

**Hierarchy** by organizing information in same location(s) so the viewer gains extensive knowledge of the design system.

**Consistency & Proximity** in component placement created connectedness thereby for the viewer to easier group/chunk element properities.

**Alignment** of content in vertical blocks, right to left to create unity and lead the viewer through the design.

**Affordance** via icons that viewers are generally familiar. This is reinforced via wayfinding page.

**Symmetry & Attractive Bias** through image, text, colour, whitespace, placement and size creates balance, harmony, and stability keeping the design clean and colorful.

## Feature Channels

**Lines, page borders**, and to create sections

**Shape** through the use of symbols / icons to bring attention to viewer interactive elements present, and tool usage

**Area** via interactive highlighting box, or containment

Use of **Redundant coding** to enhance perception speed

**DEMO**

# WHATS NEXT

- 1 REST
- 2 COMPLETE REMAINDER OF STYLES
- 3 ENSURE ACCESSIBILITY ACROSS ALL CONTENT
- 4 MONITOR & MEASURE
- 5 DETERMINE AND BUILD BUSINESS CASE
- 6 DEVELOP PHOTOVISUALIZATION BOOK

"The greatest value of  
a picture is when it  
forces us to notice  
what we never  
expected to see."

John Tukey
